TECHNICAL SKILLS

Languages: Python, Java (SE/EE), C/C++, JavaScript, HTML, CSS

AI & LLM Tools: LangChain, LangGraph, GPT-OSS (Llama 3.x), OpenAI API, FAISS, RAG, Embeddings, Groq

Frameworks: Spring Boot, Hibernate, React, Node.js, Express.js

Database systems: MySQL, PostgreSQL, MongoDB, SQL

EXPERIENCE

Software Engineer Intern

Feb 2025 – May 2025

IpserLab

Fort Worth, TX

- Engineered a scalable microservices-based platform using Spring Boot, PostgreSQL, and React, implementing efficient data retrieval and client-side rendering optimizations that reduced UI load by 40% and significantly improved cross-browser performance
- Integrated OAuth2 authentication and granular role-based access using clean, modular backend design to enable secure workflows for admins, consumers, and nutritionists; added password modals and approval pipelines, improving operational efficiency by 30%
- Redesigned key backend and frontend modules, applying DTO-based optimizations and reusable React components, resulting in a 20% boost in maintainability and improved user responsiveness across all views
- Built and integrated an LLM-powered transformation system enabling structured modifications to recipes (scaling, ingredient substitution) using dynamic prompt pipelines and controlled output formatting

Software Development Engineer

Jul 2022 – Aug 2023

Netzwerk.AI

Gulbarga, India

- Spearheaded the SDLC of a Learning Management System (LMS) using Spring Boot, JSP/JSTL, Hibernate, and MySQL, integrating 12 web pages and robust user authentication features, reducing login issues by 30%
- Developed and optimized 100+ RESTful web services, reducing backend response times by 15%, and implemented MySQL schemas for 5,000+ records to streamline data retrieval and support course management for 200+ users
- Collaborated with cross-functional teams to resolve 30+ issues through unit testing, debugging, and validation, improving application performance by 20% and ensuring seamless usability with detailed documentation
- Enhanced platform reliability by implementing structured exception handling, optimizing Hibernate interactions, and refining validation workflows, reducing recurring LMS failures and improving release stability

PROJECTS

AI-Powered Coding Assistant | *LangGraph + GPT-OSS + Groq*

Dec 2025 – Jan 2026

- Designed an agentic AI system using LangGraph to autonomously plan, generate, and refine full-stack applications from natural language prompts using multi-step LLM pipelines
- Implemented tool-calling, file-system execution, and validation loops to enable structured code generation and iterative improvement across multi-file projects

Feed Share | *AWS, Spring Boot, Hibernate, MySQL, S3, Ajax, Nginx*

Nov 2025 – Dec 2025

- Launched a web application for sharing surplus food from campus events, featuring real-time feed updates, location-based data, and user account management, fostering collaboration and reducing food waste on campus
- Migrated the app to AWS using EC2, S3, and cloud-hosted MySQL with CI/CD deployment workflows; configured Nginx for HTTPS and reverse proxy, and optimized backend performance with Spring Boot and Hibernate

NU Haul | *MERN – MongoDB, Express.js, React.js, Node.js, REST API*

Oct 2025 – Nov 2025

- Devised a full-stack MERN platform for Northeastern University students, enabling seamless buying, selling, and renting of household goods with a user-friendly interface and efficient workflows
- Crafted advanced search filters, email verification, and a secure login system, enhancing platform usability, improving user security, and streamlining transaction processes for efficient operations

EDUCATION

Northeastern University

Master of Science in Information Systems

Boston, MA

Sep 2023 – Dec 2025
